Molecular cloning of two west African human immunodeficiency virus

type 2 isolates that replicate well in macrophages: a Gambian

isolate, from a patient with neurologic acquired immunodeficiency
syndrome, and a highly divergent Ghanian isolate immunodeficiency

Proc. Natl. Acad. Sci. U.S. A. 86:2383-2387(1989).

- MISCELLANEOUS: THIS ISOLATE IS FROM A GAMBIAN CASE OF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (POTENTIAL)

                                                                                                                                                                                                                                                                                                                                                                                                          Any Polyprocein precursor - numan immunodericiency virus type 1 (strain KB-1-9922)

N.Alternate names: coat polyprotein
N.Contains: coat protein gp120; coat protein gp32
C.Species: human immunodeficiency virus type 1, HIV-1
A;Note: host Homo sapiens (man)
C;Date: 31-Dec-1993 #sequence_revision 31-Dec-1993 #text_change 01-Mar-1996
C;Accession: 842995
R;Shimizu, H.; Hasebe, F.; Tsuchie, H.; Morikawa, S.; Ushijima, H.; Kitamura, T.
Virology 189, 534-546, 1992
A;Title: Analysis of a human immunodeficiency virus type 1 isolate carrying a truncated A;Accession: B42995
A;Accession: B42995
A;Accession: B42995
A;Molecule type: mANA
C;Genetics:
A;Conetics:
A;Gene: env
C;Genetics:
A;Gene: env
C;Superfamily: type E retrovirus env polyprotein; transmembrane protein
C;Keywords: coat protein; glycoprotein; polyprotein; transmembrane protein
C;Keywords: coat protein gp120 #status predicted <CP1>F;1-33/Region: cleavage processing #status predicted <CP2>F;1-34/Region: cleavage processing #status predicted <CP2>F;1-35/Region: cleavage processing #status predicted <CP2>F;1-151/Region: cleavage processing #status predicted <CP2>F;11-51/Region: cleavage processing #status p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  F.17-37/Region: hydrophobic #status predicted <CPl>
